

7805 voltage regulator provides 5 volts power to all circuitry. Need heatsink. MAX232 converts 5 volt level serial data to RS-232 levels for computer.

Limiting resistor prevents large surge current into SuperCap when power is turned on. Suggested resistor value of 100 ohms, 1/2 watt.

Three NiCad cells could be used but you will need to choose resistor value based on size of cells and desired charging rate.

3 volt Lithium battery can be used for memory backup but Do Not connect diode and resistor for charging. Never charge Lithium battery.
